*Abstract:* The NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources (40 CFR part 63 subpart JJJJJ) fulfills the requirements of section 112 of the Clean Air Act (CAA), which requires the U. S. Environmental Protection Agency (EPA) to promulgate national emission standards for industrial, commercial, and institutional boilers. Records and reports required by the NESHAP for industrial, commercial, and institutional boilers area sources are necessary to enable EPA to identify sources subject to the standards and to ensure that these standards are being achieved. Records and reports must be maintained at the facility and/or submitted to EPA. All reports are sent to the delegated state or local authority. In the event that

there is no such delegated authority, the reports are sent directly to the EPA regional office.

*Form Numbers:* None.

*Respondents/affected entities:* Owners and operators of industrial, commercial, or institutional boilers.

*Respondent's obligation to respond:* Mandatory (40 CFR Part 63, Subpart JJJJJ).

*Estimated number of respondents:* 96,985 (total).

*Frequency of response:* Initially, biennially, semiannually and annually.

*Total estimated burden:* 1,656,984 hours (per year). Burden is defined at 5 CFR 1320.3(b).

*Total estimated cost:* \$284,902,526 (per year), including \$125,515,823 annualized capital and/or operation & maintenance costs.

*Changes in the Estimates:* There is a decrease in the total estimated burden as currently identified in the OMB Inventory of Approved Burdens. This decrease is not due to any program changes. The change in burden and cost estimates occurred because the standards have been in effect for more than three years and the requirements are different during initial compliance (new facilities) as compared to the on-going compliance, which is reflected in this estimates for this ICR. The previous ICR reflected those burdens and costs associated with initial activities for subject facilities. This includes purchasing monitoring equipment and conducting performance tests. This ICR, by in large, reflects the on-going burden and costs for existing facilities. The overall result is a decrease in both burden hours and costs.

There is also a decrease in total annual capital/startup and O&M costs as compared to the previous ICR. This decrease is attributed to the fact that initial compliance with the standards occurred during the period of the previous ICR (e.g., monitors were purchased). For the next three years, however, fewer monitors will be purchased, but existing CEM monitors will have on-going O&M costs.
